

hazardous waste recovery

From our network of service centres we are capable of transporting the full spectrum of hazardous waste streams, from sludges to solvents and acids. Our specialist tankers use a diverse range of construction materials and the latest self-loading technology

Equipment

Mild steel, stainless steel and glass flake/resin lining tankers are available, which can be equipped with earthing equipment, spark arrestors, flame traps, vapour return for noxious/volatile substances and coded hoses. Advanced safety equipment and intensive staff training ensure all waste is collected professionally and safely.

Vacummation

Our liquid ring vacummation units are fitted with high-performance liquid ring vacuum pumps, producing between 1000 and 1900 cfm to assist in the fast and safe loading and discharge of material. Tankers and units with vacuum lines and air injectors and our in-line pumps are ideal for uplifting liquids, sludges and heavy materials.

These remove waste and material from inaccessible areas as well as at distance and depth. Once the tanker or unit is loaded it can either transfer the material on-site or transport the load to a designated and suitable disposal site.

Professional *and safe* recovery

Safe and innovative solutions

Veolia Environmental Services can recommend safe and innovative solutions for the disposal of all types of waste streams, from regular bulk tanker collections to the removal of drums from site.

Waste is collected and transported safely and efficiently within the requirements of legislation, including:

- Duty of Care
- The Environmental Protection Act
- Hazardous Waste Regulations

An innovative approach to reusing waste

Veolia Environmental Services is constantly conducting research into new and more efficient ways to re-use waste products. One result of this approach is the process involved in the production of Secondary Liquid Fuel. This blends organic wastes to a tight specification to form a secondary liquid fuel used to fire cement kilns.

Solutions for total peace of mind

Inorganic liquid waste must undergo various treatments in order to ensure safe disposal. Whatever the required process, Veolia Environmental Services provides solutions that give you total peace of mind.

Treatments include:

- Neutralisation of acidic and alkali materials
- De-watering of sludges
- Chemical oxidation of liquid and solid cyanides
- Phase separation/ultra filtration of oil/water mixtures
- Pre-treatment of heavy sludges including consolidation
- Biological treatment
