

tank cleaning

Even under the best conditions, tank cleaning and confined space entry are potentially hazardous

Veolia Environmental Services has a proven track record in the planning and project management required to minimise risk.

Customised solutions

Our solutions are based on individual objectives and take into account confined space regulations, analysis of the tank and contents, environmental considerations and associated on-site work in progress.

Tank cleaning solutions include robotic, mechanical and manual cleaning, as well as re-suspension circulation and chemical thermal methods. For each project we provide:

- A Method Statement
- Risk Assessment
- Confined Space Rescue Plan

Our fully qualified and specialised teams have the experience, knowledge and equipment for efficient and safe tank cleaning in many industries and processes, including:

- Oil and Gas
- Pharmaceutical
- Petrochemical
- Chemical
- Automotive
- Food and Drink

Our professional approach combines highly trained, experienced teams with the latest in tank cleaning technology and innovative waste management solutions. We develop tailored solutions based on our clients' objectives, taking into account confined space regulations, analysis of the tank and its contents, environmental considerations and associated work in progress on-site.

Our teams are qualified in areas such as confined space entry, environmental awareness and behavioural safety, and work to specific method statement, risk assessment and a confined space rescue plan which details the operating and safety procedures that will be installed to undertake the work.

Expert Service

With over thirty-five years of experience in tank cleaning, Veolia Environmental Services is the market leader in the field. We have a wealth of experience with tanks of all sizes and specifications, supported by strong infrastructure. All aspects of health and safety are met at all times, in-line with current legislation. Management and consultancy services are available to provide complete and expert attention to detail and planning.

Non-entry tank cleaning

We are constantly updating and introducing new equipment and methods to further increase safety standards. We have several applications for non-entry tank cleaning techniques that eliminate entry of personnel into tanks and vessels, including spinning jets such as the URAKA, butterworth and hurricane systems.

At the forefront of new technology and equipment

Use of remote and manual controlled hydraulic dozers, specialist positive displacement pumps, cold cutting equipment and many other unique equipment and services are continually being developed to further increase safety and efficiency.
